CONTENTS OF VOLUME 126

NUMBER 1, OCTOBER 1982

Review: High-Performance Ion-Exchange Chromatography of Proteins: The Current Status *Fred E. Regnier* 1

Nonideal Size-Exclusion Chromatography of Proteins: Effects of pH at Low Ionic Strength *W. Kopaciewicz and F. E. Regnier* 8

Factors Influencing Chromatography of Proteins on Short Alkylsilane-Bonded Large Pore-Size Silicas *M. J. O'Hare, M. W. Capp, E. C. Nice, N. H. C. Cooke, and B. G. Archer* 17

High-Performance Liquid Chromatography Analysis in the Synthesis, Characterization, and Reactions of Neoglycopeptides *Harvard Morehead, Patrick McKay, and Ronald Wetzel* 29

Rapid Chromatofocusing of Proteins *G. Wagner and F. E. Regnier* 37

Enzymatic Determination of Galactosylceramide Galactosidase in Tissues by NAD Cycling *Takahiko Kato and Yoshiyuki Suzuki* 44

Determination of Glutathione and Glutathione Disulfide in Rat Tissues Using Isotachophoretic Analyzer *Hiroaki Mikasa, Tomiko Ageta, Noriko Mizoguchi, and Hiroyuki Kodama* 52

Kinetic and Quantitative Measurements of Catecholamine Transport in Chromaffin Ghosts Using a Glassy Carbon Electrode *Susan Hayflick, Robert G. Johnson, Sally E. Carty, and Antonio Scarpa* 58

Elimination by Formaldehyde of Interference with 3-Methylhistidine Determination: Application of the Method to the Study of Muscle Protein Degradation *Peter W. Emery and Michael J. Rennie* 67

Purification and Characterization of the Respiratory Nitrate Reductase of *Bacillus stearothermophilus* *John O. Chikwem and Ronald J. Downey* 74

Synthesis of [^{14}C]Coproporphyrin III by Yeast Cell-Free Extracts *Henriette Chambon and Pierre Labbe* 81

Quantitative Visible Spectroscopy at Low Temperatures: A Systematic Examination *Jean-Claude Vincent, Chellappa Kumar, and Britton Chance* 86

Electrophoresis Buffers for Polyacrylamide Gels at Various pH *Tracy McLellan* 94

Observations on the Use of Guaiacol and 2,2′-Azino-di(3-Ethylbenzthiazoline-6-Sulfonic Acid) as Peroxidase Substrates *Kauko K. Mäkinen and Jorma Tenovuo* 100

Purification of Ferredoxin-NADP$^+$ Oxidoreductase from Cyanobacteria by Affinity Chromatography on 2′,5′-ADP-Sepharose 4B *Aurelio Serrano and Joaquín Rivas* 109

A Gel Eluter for Recovery of Proteins Separated by Polyacrylamide Gel Electrophoresis *George L. Gerton, Nathan J. Wardrip, and Jerry L. Hedrick* 116

Primary Enzyme Quantitation Using Substrates Labeled with a Second Indicator Enzyme. I. Elastase Determination Using Peroxidase-Labeled Elastin *George C. Saunders, Zita Svitra, and Adelmo Martinez* 122

Analysis of Nitrate, Nitrite, and [^{15}N]Nitrate in Biological Fluids *Laura C. Green, David A. Wagner, Joseph Glogowski, Paul L. Skipper, John S. Wishnok, and Steven R. Tannenbaum* 131

Rapid Recording Luminometric Assay of Adenosine 3′,5′-Cyclic Monophosphate Phosphodiesterase Activity and a Possible Pitfall in Coupled Enzyme Assays *Kari Suoranta and John Londesborough* 139

High-Sensitivity Amino Acid Analysis: Methodology for the Determination of Amino Acid Compositions with Less than 100 Picomoles of Peptides
Peter Böhlen and Roland Schroeder 144
A Rapid Purification Procedure for Tetrodotoxin Derivatives by High-Performance Liquid Chromatography *Takashi Nakayama and Susumu Terakawa* 153
Development of Competitive Enzyme Immunoassays for Human Serum Angiotensin-1-Converting Enzyme: A Comparison of Four Assay Configurations
Joseph J. Lanzillo and Barry L. Fanburg 156
Purification of the Glial Fibrillary Acidic Protein by Anion-Exchange Chromatography
Doris Dahl, Carol J. Crosby, Eileen E. Gardner, and Amico Bignami 165
Automated Measurement of Proteinase Activity with a Fluorogenic Substrate Using an Inverted Fluorescence Microscope
M. H. Dresden, J. P. Rotmans, A. M. Deelder, G. Koper, and J. S. Ploem 170
Separation of Basic, Hydrophilic Peptides by Reversed-Phase Ion-Pair Chromatography. II. Analytical Applications with Particular Reference to Phosphoserine Peptides *Bengt Fransson, Ulf Ragnarsson, and Örjan Zetterqvist* 174
Convenient Procedure for the Isolation of Highly Enriched, Cytochrome *P*-450-Containing Microsomal Fraction from *Candida tropicalis*
Othmar Käppeli, Marija Sauer, and Armin Fiechter 179
Periodate Oxidation of Methionine in Proteins
R. Bryan Yamasaki, David T. Osuga, and Robert E. Feeney 183
Analysis of Proteoglycans by High-Performance Liquid Chromatography: A Rapid Micromethod for the Separation of Proteoglycans from Tissue and Cell Culture
Renato V. Iozzo, Ricardo Marroquin, and Thomas N. Wight 190
An Agarose Derivative Containing an Arsenical for Affinity Chromatography of Thiol Compounds *Ulf Hannestad, Per Lundqvist, and Bo Sörbo* 200
A Kinetic Assay for Cellulases *D. F. Day and W. E. Workman* 205
Low-Pressure Microwave-Induced Helium Plasma Emission Spectrometry: Determination of Subnanogram Quantities of Zinc by Use of a Tungsten Filament Vaporization System
Takahiro Kumamaru, James F. Riordan, and Bert L. Vallee 208
Determination of Picogram Quantities of Zinc in Zinc Metalloproteins by Atomic Absorption Spectrometry Using a Graphite Furnace Atomizer
Takahiro Kumamaru, James F. Riordan, and Bert L. Vallee 214
An Improved Method for Preparing Large Arrays of Bacterial Colonies Containing Plasmids for Hybridization: *In Situ* Purification and Stable Binding of DNA on Paper Filters *Floyd Taub and E. Brad Thompson* 222
A Method for Isolation of a Large Amount of a Single-Stranded DNA Fragment
Jeffrey R. Patton and Chi-Bom Chae 231

NUMBER 2, NOVEMBER 1, 1982

Problems Encountered in Measuring Erythrocyte Pyrimidine 5′-Nucleotidase Activity
John D. Torrance, Michael S. Wulfsohn, and Wendy Mills 235
Protein Assays in Very Dilute Solutions *Koji Nishio and Makoto Kawakami* 239
Fluorometric Determination of Selenium in Nanogram Amounts in Biological Materials using 2,3-Diaminonaphthalene
Ryoichi Hasunuma, Tadao Ogawa, and Yasuhiro Kawanishi 242

Isolation of *in Situ* Crosslinked Ligand–Receptor Complexes Using an Anticrosslinker Specific Antibody
Kurt Ballmer-Hofer, Verena Schlup, Paul Burn, and Max M. Burger 246
Simultaneous Determination of Tyrosine and Tryptophan Residues in Proteins by Second-Derivative Spectroscopy *Luigi Servillo, Giovanni Colonna, Ciro Balestrieri, Raffaele Ragone, and Gaetano Irace* 251
Qualitative Analysis of Trimethylsilylated Daunosamine and *N*-Alkylated Analogs by Gas Chromatography–Mass Spectrometry *Paul A. Andrews, Patrick S. Callery, Feng-Te Edward Chou, Matthew E. May, and Nicholas R. Bachur* 258
Direct Assay for O^6-Methylguanine-Acceptor Protein in Cell Extracts
E. A. Waldstein, E.-H Cao, and R. B. Setlow 268
Reaction of *S*-(2-Amino-2-carboxyethylsulfonyl)-L-cysteine with Sulfite: Synthesis of *S*-Sulfo-L-cysteine and L-Alanine 3-Sulfinic Acid and Application to the Determination of Sulfite *Toshihiko Ubuka, Masahiro Kinuta, Reiko Akagi, Shozo Kiguchi, and Miyabi Azumi* 273
A Fluorimetric Guaiacol Method for Thyroid Peroxidase Activity
Toshio Harauchi and Toshio Yoshizaki 278
The Use of Affinity Chromatography for the Isolation of Two Sets of Anticarbohydrate Antibodies with Specificity for a Streptococcal Glycan
John H. Pazur, Kevin L. Dreher, Randi L. Kubrick, and Mark S. Erikson 285
A Simple Method of Isolating Tonin Using Chromatofocusing
Elvin S. P. Cheng and Brian J. Morris 295
Simultaneous Detection of ^{35}S- and ^{32}P-Labeled Proteins on Electrophoretic Gels
P. C. Cooper and A. W. Burgess 301
Identification of Cyclic Guanosine Monophosphate-Binding Proteins in *Drosophila* by Direct Photoaffinity Labeling
Anne S. Olsen, Bruce McL. Breckenridge, and Marilyn M. Sanders 306
A Micromethod for the Purification of Lysyl Oxidase *Rocco Ferrera, Barbara Faris, Peter J. Mogayzel, Jr., Wayne A. Gonnerman, and Carl Franzblau* 312
Microsequence Analysis of Peptides and Proteins. IV. Structural Studies on Human Leukocyte Interferons *John E. Shively, Ursino Del Valle, Russell Blacher, David Hawke, Warren P. Levy, Menachem Rubinstein, Stanley Stein, Courtney McGregor, Joseph Tarnowski, Robert Bartlett, David Lee, and Sidney Pestka* 318
Highly Sensitive Solid-Phase Enzyme Immunoassay for Terminal Deoxynucleotidyl Transferase
Tsuguhiro Kaneda, Saiko Kuroda, Yutaka Hirota, and Kanefusa Kato 327
High-Pressure Liquid Chromatography–Ultraviolet Analysis of Intracellular Nucleotides *Alfonso L. Pogolotti, Jr., and Daniel V. Santi* 335
Comparison of Four Different Silver-Staining Techniques for Salivary Protein Detection in Alkaline Polyacrylamide Gels *Robert D. Friedman* 346
A Faithful Double Stain of Proteins in the Polyacrylamide Gels with Coomassie Blue and Silver *Shinkichi Irie, Mariko Sezaki, and Yoshihiro Kato* 350
Measurement of Protein in Cell Suspensions Using the Coomassie Brilliant Blue Dye-Binding Assay *Geir O. Gogstad and May-Britt Krutnes* 355
Use of 1-Fluoro-2,4-dinitrobenzene as a Probe for the Presence of Hydrodisulfide Groups in Proteins *Tadashi Sawahata and Robert A. Neal* 360

Assay of Trace Amines by Gas Chromatography with Nitrogen Detector in Biological Samples Using C_{18} SEP-PAK Cartridges for Sample Cleanup
Mohammad Mumtaz, N. Narasimhachari, and Robert O. Friedel 365
Ultrasensitive Staining of Nucleic Acids with Silver
John L. Beidler, Peter R. Hilliard, and Randolph L. Rill 374
Quantitation of Guanosine 5′,3′-Bisdiphosphate in Extracts from Bacterial Cells by Ion-Pair Reverse-Phase High-Performance Liquid Chromatography
R. Little and H. Bremer 381
Biosynthesis of L-[^{15}N]Aspartic Acid and L-[^{15}N]Alanine by Immobilized Bacteria
Zvi E. Kahana and Aviva Lapidot 389
The Measurement of Erythrocyte Thiamin Pyrophosphate by High-Performance Liquid Chromatography *L. G. Warnock* 394
A Silver-Staining Technique for Detecting Minute Quantities of Proteins on Nitrocellulose Paper: Retention of Antigenicity of Stained Proteins
K. C. Leonard Yuen, Terrell K. Johnson, Robin E. Denell, and Richard A. Consigli 398
Isolation and Elution of Proteins from Sodium Dodecyl Sulfate–Polyacrylamide Gels with an Intermediate Agarose-Containing Layer in the Acrylamide Gel
E. Méndez 403
Microassays for Glucose 6-Phosphate and 6-Phosphogluconate Based on Bioluminescent Techniques *J. Palmisano and J. H. Schwartz* 409
Preparation of Three Types of Heparin–Sepharose and Their Binding Activities to Thrombin and Antithrombin III
Miyuki Funahashi, Isamu Matsumoto, and Nobuko Seno 414
Agarose Drop Method for Loading Thin Polyacrylamide Gels *Roger C. Wiggins* 422
Use of Size-Exclusion High-Performance Liquid Chromatography for the Analysis of the Activation of Prothrombin
David P. Kosow, Sam Morris, Carolyn L. Orthner, and Moo-Jhong Rhee 425
A Spectrophotometric Assay for Soluble and Immobilized *N*-Hydroxysuccinimide Esters *Talia Miron and Meir Wilchek* 433
A Method for Measuring Natural Abundance Intramolecular Stable Carbon Isotopic Distributions in Malic Acid
Bruce W. Bromley, George D. Hegeman, and Warren Meinschein 436
Sensitive Fluorogenic Substrates for the Detection of Trypsinlike Proteases and Pancreatic Elastase *Paul J. Brynes, Patricia Andrade, and David Gordon* 447

The Subject Index for Volume 126 will appear in the December 1982 issue as part of a cumulative index for the year 1982.

INFORMATION FOR AUTHORS[1]

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell and tissue culture techniques that are of general application.

— Sequencing and synthesis of nucleic acids; chemical mutagenesis.

— Purification methods for enzymes and other proteins when a high level of purity has been achieved.

— Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that have a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to ***Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.** In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** These words will also be used in the preparation of the annual cumulative subject index for the journal. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

---

[1] An extended Information for Authors was published in the July 15, 1982 issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
